

AERO -Nourish™

Aero-Nourish™ is a specialized macro and micronutrient blend specifically designed for aerial application via drones, airplanes, and helicopters on row and field crops. This blend of nutrients is designed to help meet the needs of the crop during critical growth stages to maximize vegetative and reproductive crop growth.

FEATURES & BENEFITS

- **Specifically designed for foliar application with drone and aerial application technology**
- **Great for all crops**
- **Delivers nutrients when crops need them most, especially aiding in the relief of plant stress**
- **Built to optimize reproductive growth in most crops**
- **Formulated to be used as part of a tank mix with other crop protection products, reducing the number of passes needed in the field**

FREQUENTLY ASKED QUESTIONS

Q: What is the value of the nutrient blend in Aero-Nourish?

A: Developed with an understanding of crop nutrient needs throughout the growing season, Aero-Nourish is focused on delivering essential nutrition to support vegetative and reproductive growth. The application of Aero-Nourish will efficiently deliver nutrients to support nitrogen utilization, energy production, root formation, and reproductive growth.

Q: What is the benefit of drone and aerial application methods for fertilizer applications?

A: Using aerial fertilizer applications increase efficiency by covering large cropping areas quickly and precisely. Drones also minimize waste by delivering fertilizer where it is required without the need of traditional foliar application methods.

Q: How does applying Aero-Nourish with aerial applications save time and money?

A: Aerial application via drone, airplane, or helicopter can save time by quickly applying products to fields. Drone applications allow fertilizer use rates to be lowered by customizing applications through the field to where the nutrients are needed most.

Q: When should I apply Aero-Nourish?

A: On field, row, and vegetable crops apply Aero-Nourish post emergence at the vegetative or reproductive growth stages.

Q: What is the use rate for Aero-Nourish?

A: Aero-Nourish is applied at a rate of 16-32 oz per acre.

Q: Can variable rate be used to apply Aero-Nourish?

A: Yes. When applied with aerial applications, variable rate technology can be utilized to create a custom application plan that allows for fertilizer application rates to be adjusted throughout the field to accommodate the various nutrition needs.

Q: Can Aero-Nourish be mixed with crop protection products?

A: Yes, Aero-Nourish is compatible with many crop protection products. The Andersons recommends a compatibility (jar) test before field mixing and application. Always read and follow all individual product labels before use. For more information, visit AndersonsPlantNutrient.com/TankMix.

GUARANTEED ANALYSIS

Total Nitrogen (N)..... 4.0%
 3.6%....Ammoniacal Nitrogen
 0.4%....Urea Nitrogen
 Sulfur (S) 2.0%
 2.0%....Combined Sulfur
 Boron (B)..... 0.5%
 Copper (Cu) 0.5%
 Manganese (Mn).....1.5%
 Zinc (Zn).....2.5%

Derived from: urea, aqua ammonia,
 boric acid, zinc sulfate, copper sulfate,
 manganese sulfate

PHYSICAL PROPERTIES

pH..... 7.3-7.8
 Specific Gravity.....1.18-1.22 @ 68°F
 Density10.0 lbs/gal
 Salt Out.....25°F

CORN APPLICATION

SOYBEAN APPLICATION

	Application	Use Rate (per acre)	Timing
Field & row crops; vegetable crops; soft & tree fruit	Foliar	16-32 oz	Post emergence
