

AERO--Trio™

Aero-Trio™ is a specialized micronutrient blend specifically designed for aerial application via drones, airplanes, and helicopters on row and field crops. This blend of micronutrients is designed to help meet the micronutrient needs of the crop during critical growth stages to maximize vegetative and reproductive crop growth.

FEATURES & BENEFITS

- **Specifically designed for foliar application with drone and aerial application technology**
- **Great for all crops**
- **Delivers nutrients when crops need them most, especially aiding in the relief of plant stress**
- **Built to optimize reproductive growth in most crops**
- **Formulated to be used as part of a tank mix with other crop protection products, reducing the number of passes needed in the field**

FREQUENTLY ASKED QUESTIONS

Q: What is the value of calcium, magnesium, and boron in Aero-Trio?

A: The unique blend of micronutrients in Aero-Trio is designed to target the unique needs of the crop during reproductive growth stages. Focusing on pollination, seed set, and nutrient utilization, Aero-Trio is an excellent addition to a complete nutrition program.

Q: What is the benefit of drone and aerial application methods for fertilizer applications?

A: Using aerial fertilizer applications increase efficiency by covering large cropping areas quickly and precisely. Drones also minimize waste by delivering fertilizer where it is required without the need of traditional foliar application methods.

Q: How does applying Aero-Trio with aerial applications save time and money?

A: Fertilizer application via drone, airplane, or helicopter can save time by quickly applying products to fields. Drone applications allow fertilizer use rates to be lowered by customizing applications through the field to where the nutrients are needed most.

Q: When should I apply Aero-Trio?

A: On field, row, and vegetable crops apply Aero-Trio post emergence at the vegetative or reproductive growth stages.

Q: What is the use rate for Aero-Trio?

A: Aero-Trio is applied at a rate of 16-32 oz per acre.

Q: Can variable rate be used to apply Aero-Trio?

A: Yes. When applied with aerial applications, variable rate technology can be utilized to create a custom application plan that allows for fertilizer application rates to be adjusted throughout the field to accommodate the various nutrition needs.

Q: Can Aero-Trio be mixed with crop protection products?

A: Yes, Aero-Trio is compatible with many crop protection products. The Andersons recommends a compatibility (jar) test before field mixing and application. Always read and follow all individual product labels before use. For more information, visit AndersonsPlantNutrient.com/TankMix.

GUARANTEED ANALYSIS

Calcium (Ca) 6.0%
 Magnesium (Mg) 1.0%
 Boron (B)..... 0.5%

Derived from: calcium carbonate, magnesium oxide, boric acid, and carboxylic acids

PHYSICAL PROPERTIES

pH..... 4.0-6.0
 Specific Gravity..... 1.20 @ 68°F
 Density 10.2 lbs/gal
 Salt Out..... 18°F

CORN APPLICATION

SOYBEAN APPLICATION

	Application	Use Rate (per acre)	Timing
Field & row crops	Foliar	1-2 quarts	Add to fertigation/ pesticide program
Vegetables	Foliar	1-2 quarts	
Tree & bramble fruit	Foliar	2-4 quarts	

Visit AndersonsPlantNutrient.com/Tank-Mix to view approved products for tank mixing with specific herbicides.
