#### DIRECTIONS FOR USE

Apply only as directed during the growing season.

Use Contec DG® Dispersing Granule Technology 15-0-15 for greens, tees and other fine turf areas where a high nitrogen and potassium application is desired or when iron and manganese are needed to help correct or prevent deficiencies during the growing season.

Watering in this product will disperse each granule into thousands of particles. This will facilitate the movement of the nutrients into the soil. This particle dispersion will also greatly reduce ball, shoe and mower pickup. Cold weather and/or cold water (lower than 45°F / 7°C) can result in slower particle dispersion.

Application to wet, close-cut golf turf may result in foliar staining, which will discolor the turf to a brown/black appearance. This will occur even if immediate irrigation or rainfall occurs. Be sure to apply this product to dry turf only.

#### Application Rates:

LOW:	3.33 lbs/1,000 sq. ft.
MEDIUM:	5.00 lbs/1,000 sq. ft.
HIGH:	6.66 lbs/1,000 sq. ft.

#### FLORIDA APPLICATIONS:

**For all applications:**

- Immediately after application, apply a minimum of 0.2 inches of water to disperse particles into the root zone. Due to variations in temperature and water pH, best results are achieved by splitting the irrigation into 2 applications at 10-15 minutes apart. This will allow for more thorough particle dispersion into the root zone.
- Particle color may vary from lot to lot.
