Lawn Alive is a trademark of Outdoors, Inc. **D25**

Lawn Alive is a ready to spray fertilizer and soil treatment that can be used on lawns, gardens, and compost piles. It contains both quick- and slow-release nitrogen, iron, and four types of endomycorrhizae fungi. Endomycorrhizae fungi penetrate roots allowing for the beneficial transfer of water and nutrients.

**NOTE:** This product contains micronutrient iron for extra greening and to help prevent iron deficiency. Iron may stain concrete and other surfaces.

## DIRECTIONS FOR USE

**Lawns** – Apply Lawn Alive in the evening at sunset. The cooling temps will prevent the spray from rapidly drying. During active growing seasons in the Spring, use the green 20:1 spray bottle for a heavy application. A heavy application will cover up to 2,000 sq ft. In the Summer, use the yellow 60:1 spray bottle for a light application. A light application will cover up to 6,000 sq. ft. Spray evenly while walking at a steady pace (about 3 mph), moving the nozzle side to side to cover an area of approximately 6 ft wide. Coverage may vary based on walking speed and water pressure.

For spray tanks, mix one cup of Lawn Alive with one gallon of water and apply at the rate of one gallon of mix per 1,000 sq ft. Run irrigation early the next morning before sunrise.

**Gardens** – Mix Lawn Alive in the same procedure as for lawns. However, apply Lawn Alive to the GROUND surrounding the plants, not to the foliage. Water in soon after application.

**Compost Piles** – Organic matter within compost piles need nutrients to decompose at a faster rate. Flatten out piles, spray with mixtures shown above, then re-pile. Allow to rest for at least 3 days then the compost may be used in any garden. The addition of Dirt Booster is strongly recommended.
