For turf:

Watering in this product will disperse each granule into thousands of particles. This will facilitate the movement of the nutrients into the soil. This particle dispersion will also greatly reduce ball, shoe and mower pickup.

This product should be used when a soil test has been conducted, within the last 36 months, and the test indicates that the soil is deficient in plant available phosphorus or the intended use is for establishing grass or repairing damaged grass during the growing season in which the grass is established.

It is recommended that this product be applied to dry turf only.
