

Foltec SG COMPATIBILITY

Foltec SG has changed how turf managers approach their product spray applications, allowing for flexibility to add humics, sea plant extract, and individualized nutrition amounts to standard fertilizer, fungicide, or herbicide applications. Even though Foltec SG granules are designed to quickly solubilize in a spray tank mix, product incompatibility issues could still occur.

Product incompatibility can lead to separation or precipitates, filters and nozzles getting clogged, resulting in lost time and reduced product efficacy. To avoid these issues, always confirm product compatibility with a jar test before mixing a full tank, especially when adding new components to the tank mix.

As a starting point, many common control products have been tested with various Foltec SG products, as outlined in the chart below. Compatible means no known issues; mild incompatibility means proceed with caution, potential for issues; incompatible means this product combination is not recommended in any form.

Active Ingredient	Foltec® SG 24-0-8	Foltec® SG 8-24-8	Foltec® SG 8-0-24	Foltec® SG 16-0-16	Foltec® SG Minors
